For Reporting  
Services**

**BristolPublisher**

**BristolPublisher** lets the user define “Publication Sets” that can be run at any time live or with a batch scheduler to push/pull reports to “information consumers”.

One, two or several BristolReport reports are at the core of a “Publication Set”. Reports execution leads to one of the following result.

- Html, Excel or PDF files are placed in a directory or directly on a web portal.
- Emails are sent with attached generated documents. The user can define relationships between mail recipients (from any Mail Directory) and documents looping dimensions.
- Folders are created by BristolPublisher in Reporting Services based on documents looping dimensions values. Reports are exported to ReportingServices within the folders either as snapshot reports or dynamic live reports.

A document can also be “enabled for pulling”. This feature allows deployment of secured “document on demand” type of application using a zero footprint thin client.

Microsoft Reporting Services is a Microsoft Corp. registered trade mark.
