

# BristolReport

BristolReport empowers the user to access his data from multiple cubes and to simply create and publish customized business driven reports

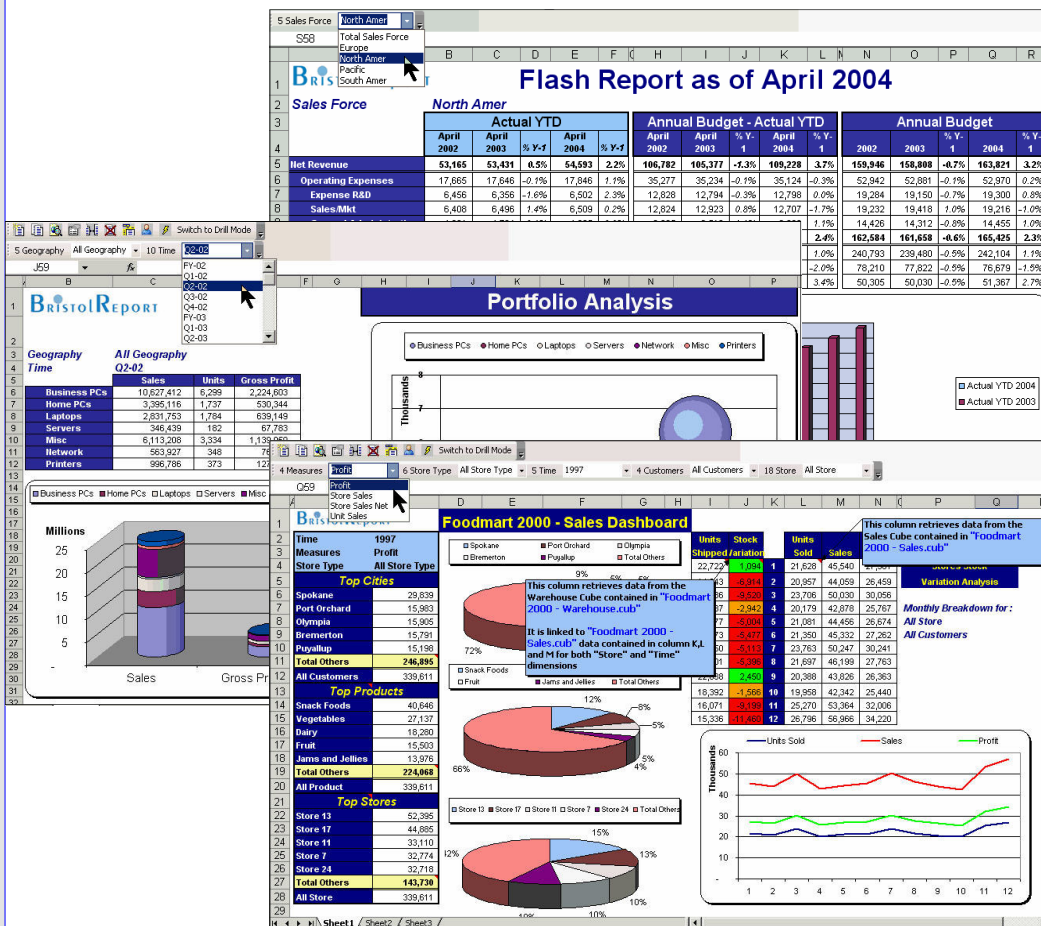

**BristolReport**

**BristolReport Selector**

**BristolReport KPIBuilder**

**BristolReport for Reporting Services**

**BristolPublisher**

BristolReport is the ultimate solution for an end user to access his data from multiple data sources and simply create flexible, customized business performance management reports in Excel. BristolReport provides also the user with all the functionalities to publish his reports and share the information with a community of internal or external users.

BristolReport addresses all the needs the user will come across while designing or deploying his reports. The first two needs are to filter the data or dimension members and to define new measures and aggregates not available in his cubes.

BristolReport Selector is the simplest, yet most powerful and complete selector. User defined selection logic is re-usable in other reports.

BristolReport KPIBuilder guides the user through a wizard to define his custom measures and aggregates. It hides all the intricacy of generated code the user doesn't want to deal with.

To run a report from within Microsoft ReportingServices, BristolReport for ReportingServices comes handy. Reports are exported as snapshot reports or dynamic live reports. On parameter change, the report is executed and displayed within the browser.

BristolPublisher is an application product that helps the user to automate or industrialize reports production and dispatching in a push or pull mode.

## BristolReport Technical Features

- Data sources : Microsoft Analysis Services or .cub files
- ODBO or Web Services (XMLA) connection modes
- Access in read and write modes
- A report accesses multiple cubes
- A report is a collection of InfoSets
- InfoSets cooperate to display a report
- Each InfoSet manages its rendering properties
- InfoSets can be linked on page, column and row dimensions to provide data consistency.
- Multiple selection steps.
- All selection methods are available.
- Selection steps are combined using add, keep, remove or sort verbs.
- Selection and KPI definition intelligence are managed in an XML catalog to be re-used in other reports
- A complete and documented object model extends the Excel object model using the same pattern of collections, objects, methods and properties.
- Excel 2000 and later versions
