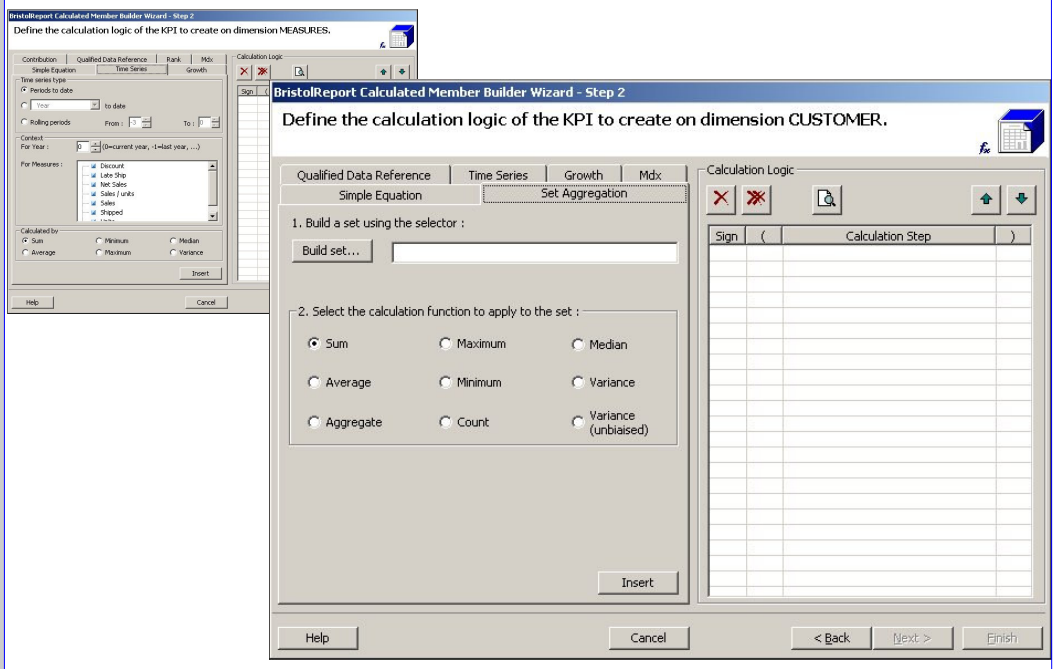
A wizard guides the user to define new custom measures and calculated members. New measures are re-usable in all reports.



Because all KPI's and aggregates a user needs in his report are never available in the cube, BristolReport KPIBuilder takes in charge through a friendly user interface the definition of what are also called "custom measures" and "custom aggregates".

Distinct tools or wizard tabs are made available in the case of a Time dimension, a Measures dimension or other type of dimensions.

Whether you need to add to your report a sales moving average, a YTD revenue, or a contribution, BristolReport KPIBuilder will generate the right syntax for you.

A newly defined KPI can be used in the definition of other KPI's thus extending the combination of available calculations (e.g. Growth of the YTD revenue)

KPI's are saved both in the an XML catalog and in the document itself to remain available when the report is sent to other users.

When deployed to Microsoft ReportingServices, user defined KPI's are also exported and displayed in a thin client browser.

Solving order and format strings are supported by BristolReport KPIBuilder.

Microsoft Reporting Services is a Microsoft Corp. registered trade mark.
